Wednesday May 18, 10am–12pm
Memorial Union, Garrison Room
RSVP: http://klotzworkshop.eventbrite.com

ABOUT THIS WORKSHOP
In today’s scientific environment it has become more important than ever to connect with those we lead and beside whom we work each day. One’s ability as a leader to mentor and motivate members of his/her team can make all the difference between a high functioning, high impact team and frustration and low morale among all. Learning the impact of your inherent personal styles and preferences on others, as well as the needs and preferences of the members of your team, is crucial to your success as a leader at any level. Gaining an understanding of how individuals are motivated and how to mentor the members of your team to their unique skills and abilities will help you continue to grow as the leader of a productive team.

WHO SHOULD ATTEND
This workshop is open to Graduate Students, Postdoctoral Scholars and Faculty.

PARTICIPANTS WILL
• Increase their knowledge about how individuals are motivated;
• Learn effective ways to mentor individuals based on their skill & competency level;
• Identify ways that they can begin to mentor and motivate more effectively;
• Leave with a draft action plan developing their mentoring and motivating skills.
